

## SWIRSKII

*Amblyseius swirskii* is used for the **prevention, control, and management of thrips and whitefly.**

Use these predatory mites preventatively and when signs of the pests appear.

### CROPS

Citrus, blueberries, strawberries, cannabis, peppers, ornamentals and various vegetable crops.

### EFFECTIVE AGAINST

Young larvae of various Thrips species  
Eggs & larvae of whiteflies  
Tarsonemid mites

### STORAGE

Available in:  
25k, 50k, 100k, 500k

### APPLICATION INSTRUCTIONS

The adults can be stored not for longer than 24 hours prior to release if necessary but not for longer than 2 days.

- Swirskii are sold & supplied in adult form.
- Sprinkle the contents of the bottle on leaves of affected plants/trees at head height & if possible, in close proximity to mites.
- Once the applied, the adult mites will start dispersing immediately and start looking for prey.

### RELEASE TIPS

Swirskii are best released in early spring & summer, before mite populations build up to high levels. In Citrus orchards, releases should be considered after the spring complex sprays are complete. Do not release Swirskii too soon after applying toxic chemicals & avoid harsh chemical applications after insects are introduced.
